

**Abstract****MOSAIC PROTEIN AND RESTRICTION  
ENDONUCLEASE ASSISTED LIGATION METHOD  
FOR MAKING THE SAME**

A mosaic protein comprising a variety of immunoreactive antigenic epitopes from several genotypes of hepatitis C virus. The mosaic protein provides a sensitive and specific immunological hepatitis detection assay. A restriction enzyme assisted ligation method of making an artificial gene permits controlled construction of mosaic proteins, and allows confirmatory expression of the intermediate gene products.
